GALEWRAP® —Exceptional wrapping stability with full control over packaging costs

GALEWRAP® —ORIENTED WRAPPING FILM —offers an ideal solution for ensuring stability of palletized goods during transportation. The product is easy to use simply by applying to the pallet under tension. Product stability is secured without the stretching required by traditional products.

The resulting belt effect restricts movement of the wrapped goods during transportation. This approach not only improves pallet stability, but also facilitates pallet loading and unloading.

Wrapped and protected in film, your goods travel in complete safety with no risk of falling over or being scattered and damaged. Thanks to the belt effect, goods are carried securely and protected from any mishaps.

Reliable and easy to use, cost effective and environmentally friendly, GALEWRAP® oriented film not only improves pallet stability, but also cuts wrapping costs and waste. This makes for more regular film consumption and enhanced wrapping quality.

- ▷ Highest retention & restoring force ensure better load protection in transit.
- ▷ Reduction in film weight can exceed 50%.
- ▷ No pre-stretching system required due to optimized film.
- ▷ Available for both hand and machine application.

GALEWRAP® machine film

Width 430 mm
Length up to 3,000 m
On core
Bulk
Blown film

GALEWRAP® hand film

Width 430 mm
Length Up to 600 m
On core
Bulk or in boxes
Blown film

1 Cost effective

By reducing the quantity of wrap required, the innovative wrapping concept can deliver a significant reduction in cost of wrapping a pallet.

2 Environmentally friendly

GALEWRAP® is 100% recyclable. Packaging waste can be reduced up to 60%.

3 Practical

100% slip on the outside surface facilitates the process of loading and unloading the pallets. The extensive roll length reduces the stock surface need.

4 Consistency

Regardless of the operator or the wrapping machine, this concept guarantees a constant wrapping quality and cost-optimized pallet security.

5 User friendly

Light rolls accentuates the work security and improves the packaging process.

6 Reliable

Secure and controlled wrapping decreases the risk of accidents and damage, not only to the load itself, but also to the people and equipment involved in the supply chain.
